

Flooding 101: Virginia Beach's Three Most Common Flood Types

Flooding is a significant concern in Virginia Beach due to its unique geography and coastal location. Generally, the city faces three common types of flooding: fluvial floods (river floods), pluvial floods (street or flash floods) and coastal floods (commonly associated with storm surge). Each type of flood has its own causes and is forecast in different ways. Read more for a closer look at these flood types and how the City's Flood Protection Program is working to address them.

In case you missed it, residents learned about the Pungo Ferry Road Improvements project during a public information meeting on Oct. 23. Pungo Ferry Road, from its intersection with Blackwater Road to the western approach of the Pungo Ferry Road Bridge, is particularly vulnerable to flooding from rainfall events and high tides. Read more to learn about the project, which aims to create a more resilient roadway, improve drainage, and ensure safer passage for residents, especially during extreme weather events.
